DEPARTMENT OF RADIOLOGY AND IMAGING

Patient Name : Ayyandurai G Ward / Room : /
Reg No : 1673641 / 6556720A Reported On : 18.12.2020 12:36
Request No : 2457176 Radiologist : Dr.Pudhiavan A
Ref. By : DR DHIWAKAR M
Cl. Diagnosis:

C.T. SCAN OF PNS

Clinical Profile: C/o nasal block and facial pain since 3-4 years, H/o headache on and off

Normal pneumatization of the sphenoid, both the maxillary, posterior and anterior ethmoid, and frontal sinuses.

Minimal mucosal thickening is seen in bilateral maxillary sinuses. There is no mucosal thickening or fluid collection seen in rest of the sinuses.

The maxillary ostea and the fronto ethmoid recesses are normally seen on both sides.

Deviated nasal septum to the left is seen.

The nasal turbinates are normally seen. **Bilateral concha bullosa is noted.**

Kero's type II olfactory fossa is seen on both sides with Type I optic nerve canal.

Bilateral mastoid air cells and middle ear cavity are normal.

IMPRESSION:

- CT features are of minimal mucosal thickening in bilateral maxillary sinuses.
- Deviated nasal septum to the left.
- Bilateral concha bullosa.
